reddit_analysis

January 27, 2021

1 About Dataset

Reddit is a discussion website which users can post images and text in a subforum called subreddit which users can discuss about shared contents in comment section. This dataset contains 05/2015 comment submissions from reddit users with 54.504.410 rows and 22 columns.

I got my data from kaggle unfornutely this dataset is too big to run on kaggle so I needed to download it. > https://www.kaggle.com/reddit/reddit-comments-may-2015/notebooks

If you want a JSON format of this data you can download it from: https://files.pushshift.io/reddit/comments/

2 Accessing data from sqlite and cleaning it

Used this sqlite query to clean the dataset before extracting it to csv because it caused problems while trying to import the data

I didn't import authorflaircss_class field because it is not important for our analysis

```
create table reddit_2015_05 as
select
rd.created_utc,
rd.ups,
rd.subreddit_id,
rd.link_id,
rd.name,
rd.score_hidden,
replace(
    replace(
        replace(
                replace(
                    replace(
                        replace(
                            replace(rd.author_flair_text,'\','')
                        ,'*','')
                    ,'#','')
                , X'0A', ' ')
        ,char(13),' ')
    ,';','')
,'"','') as author_flair_text,
```

```
rd.subreddit,
rd.id,
rd.removal_reason,
rd.gilded,
rd.downs,
rd.archived,
rd.author,
rd.score,
rd.retrieved_on,
replace(
    replace(
        replace(
                replace(
                    replace(
                        replace(
                            replace(rd.body,'\','')
                        ,'*','')
                    ,'#','')
                , X'0A', ' ')
        ,char(13),' ')
    ,';','')
,'"','') as body,
rd.distinguished,
rd.edited,
rd.controversiality,
rd.parent_id
from may2015 rd;
```

3 Splitting csv data to make it ready for import

I needed to split my csv file so I can import it to PostgreSQL because PostgreSQL copy command doesn't support files bigger than 4GB

I used csvsplitter from erdconcepts

Opened up cmd and inserted these lines;

```
cd C:\data\reddit\csvsplitter
```

```
CSVSplitter.exe filename="C:\data\reddit\reddit_2015_05.csv" rowcount=5000000
```

It spliced my csv to 11 files ranging from 1.2GB to 1.5GB

4 Creating table in PostgreSQL to import our dataset

I created my PostgreSQL table with this query

```
CREATE TABLE "ODS"."EXT_REDDIT_COMMENTS"
(
```

```
    created_utc integer,
    ups integer,
    subreddit_id text COLLATE pg_catalog."default",
    link_id text COLLATE pg_catalog."default",
    name text COLLATE pg_catalog."default",
    score_hidden text COLLATE pg_catalog."default",
    author_flair_text text COLLATE pg_catalog."default",
    subreddit text COLLATE pg_catalog."default",
    id text COLLATE pg_catalog."default",
    removal_reason text COLLATE pg_catalog."default",
    gilded integer,
    downs integer,
    archived text COLLATE pg_catalog."default",
    author text COLLATE pg_catalog."default",
    score integer,
    retrieved_on integer,
    body text COLLATE pg_catalog."default",
    distinguished text COLLATE pg_catalog."default",
    edited text COLLATE pg_catalog."default",
    controversiality integer,
    parent_id text COLLATE pg_catalog."default"
)

TABLESPACE pg_default;

ALTER TABLE "ODS"."EXT_REDDIT_COMMENTS"
    OWNER to postgres;
```

5 Importing dataset

Then used PostgreSQL copy command to import my data;

```
SET STATEMENT_TIMEOUT TO 3000000;

COPY "ODS"."EXT_REDDIT_COMMENTS" FROM 'C:/data/reddit/REDDIT_2015_05-000.CSV' DELIMITER ';';

COPY "ODS"."EXT_REDDIT_COMMENTS" FROM 'C:/data/reddit/REDDIT_2015_05-001.CSV' DELIMITER ';';

COPY "ODS"."EXT_REDDIT_COMMENTS" FROM 'C:/data/reddit/REDDIT_2015_05-002.CSV' DELIMITER ';';

COPY "ODS"."EXT_REDDIT_COMMENTS" FROM 'C:/data/reddit/REDDIT_2015_05-003.CSV' DELIMITER ';';

COPY "ODS"."EXT_REDDIT_COMMENTS" FROM 'C:/data/reddit/REDDIT_2015_05-004.CSV' DELIMITER ';';

COPY "ODS"."EXT_REDDIT_COMMENTS" FROM 'C:/data/reddit/REDDIT_2015_05-005.CSV' DELIMITER ';';

COPY "ODS"."EXT_REDDIT_COMMENTS" FROM 'C:/data/reddit/REDDIT_2015_05-006.CSV' DELIMITER ';';
```

```
COPY "ODS"."EXT_REDDIT_COMMENTS" FROM 'C:/data/reddit/REDDIT_2015_05-007.CSV' DELIMITER ';';

COPY "ODS"."EXT_REDDIT_COMMENTS" FROM 'C:/data/reddit/REDDIT_2015_05-008.CSV' DELIMITER ';';

COPY "ODS"."EXT_REDDIT_COMMENTS" FROM 'C:/data/reddit/REDDIT_2015_05-009.CSV' DELIMITER ';';

COPY "ODS"."EXT_REDDIT_COMMENTS" FROM 'C:/data/reddit/REDDIT_2015_05-010.CSV' DELIMITER ';';

COMMIT;
```

6 Analyzing our data for preprocessing

Original dataset is too big to handle(54.504.410 rows with 33.3GB size) maybe we should check if it is possible to reduce our data while not affecting our analysis.

```
SELECT
COUNT(*)
FROM "ODS"."EXT_REDDIT_COMMENTS" ERS
WHERE 1=1
AND LENGTH(ERS.BODY) > 2;
```

This query reduces our data to 54.333.604 rows while removing comments like 'OK' which is not meaningful on its own.

```
SELECT
COUNT(*)
FROM "ODS"."EXT_REDDIT_COMMENTS" ERS
WHERE 1=1
AND LENGTH(ERS.BODY) > 2
AND (LOWER(ERS.AUTHOR) LIKE '%\_bot\_%'
OR LOWER(ERS.AUTHOR) LIKE '%\-bot\-%');
```

This would remove 958 bot comments with comment author names contains "-bot-" or "*bot*", it is not that a huge decrease.

```
SELECT
COUNT(*)
FROM "ODS"."EXT_REDDIT_COMMENTS" ERS
WHERE 1=1
AND LENGTH(ERS.BODY) > 2
AND NOT (LOWER(ERS.AUTHOR) LIKE '%\_bot\_%'
OR LOWER(ERS.AUTHOR) LIKE '%\-bot\-%')
AND NOT(LOWER(REPLACE(ERS.BODY,'''','''))) LIKE '%im a bot%';
```

We could also filter comments with "I'm a bot" text, this also decreases dataset with 24.918 rows.

```
SELECT
COUNT(*)
FROM "ODS"."EXT_REDDIT_COMMENTS" ERS
WHERE 1=1
AND LENGTH(ERS.BODY) > 2
```

```
AND NOT (LOWER(ERS.AUTHOR) LIKE '%\_bot\_%'
OR LOWER(ERS.AUTHOR) LIKE '%\-bot\-%')
AND NOT(LOWER(REPLACE(ERS.BODY,'''','')) LIKE '%im a bot%')
AND ERS.BODY <> '[deleted]';
```

This query removes deleted comments which is 3.138.587 rows.

```
SELECT
COUNT(*)
FROM "ODS"."EXT_REDDIT_COMMENTS" ERS
WHERE 1=1
AND LENGTH(ERS.BODY) > 2
AND NOT (LOWER(ERS.AUTHOR) LIKE '%\_bot\_%'
OR LOWER(ERS.AUTHOR) LIKE '%\-bot\-%')
AND NOT(LOWER(REPLACE(ERS.BODY,'''','')) LIKE '%im a bot%')
AND ERS.BODY <> '[deleted]'
AND LENGTH(ERS.REMOVAL_REASON) = 0;
```

We should also remove removed comments which is replaced by removal reason instead of original comments.

```
SELECT
COUNT(*)
FROM "ODS"."EXT_REDDIT_COMMENTS" ERS
WHERE 1=1
AND LENGTH(ERS.BODY) > 2
AND NOT (LOWER(ERS.AUTHOR) LIKE '%\_bot\_%'
OR LOWER(ERS.AUTHOR) LIKE '%\-bot\-%')
AND NOT(LOWER(REPLACE(ERS.BODY,'''','')) LIKE '%im a bot%')
AND ERS.BODY <> '[deleted]'
AND LENGTH(ERS.removal_reason) = 0
AND ERS.BODY LIKE '% %';
```

We should remove single word comments(1.885.966 rows) because they are not important for our analysis.

```
SELECT
COUNT(*)
FROM "ODS"."EXT_REDDIT_COMMENTS" ERS
WHERE 1=1
AND LENGTH(ERS.BODY) > 2
AND NOT (LOWER(ERS.AUTHOR) LIKE '%\_bot\_%'
OR LOWER(ERS.AUTHOR) LIKE '%\-bot\-%')
AND NOT(LOWER(REPLACE(ERS.BODY,'''','')) LIKE '%im a bot%')
AND ERS.BODY <> '[deleted]'
AND LENGTH(ERS.removal_reason) = 0
AND ERS.BODY LIKE '% %'
AND ERS.AUTHOR <> 'AutoModerator';
```

With this query we remove “AutoModerator” user which every subreddit uses it for moderation purposes, It filters 286.444 rows.

```
SELECT
COUNT(*)
FROM "ODS"."EXT_REDDIT_COMMENTS" ERS
WHERE 1=1
AND LENGTH(ERS.BODY) > 2
AND NOT(LOWER(ERS.AUTHOR) LIKE '%\_bot\_%' OR LOWER(ERS.AUTHOR) LIKE '%\-bot\-%')
AND NOT(LOWER(REPLACE(ERS.BODY,'''',')) LIKE '%im a bot%')
AND ERS.BODY <> '[deleted]'
AND LENGTH(ERS.removal_reason) = 0
AND ERS.BODY LIKE '% %'
AND ERS.AUTHOR <> 'AutoModerator'
AND ERS.AUTHOR <> '[deleted]'
```

Filtering authors which they deleted their account removes 305.983 rows.

7 Cleaning data

Using sql analysis we found out which data to ignore, we must clean data before working on it.

[1]:
```
import pandas as pd
import numpy as np
import psycopg2
import time
import math

conn_string = 'host={pghost} port={pgport} dbname={pgdatabase} user={pguser}␣
 ↪password={pgpassword}'.
 ↪format(pgdatabase='MEF-BDA-PROD',pguser='postgres',pgpassword='123',pghost='localhost',pgpo
conn=psycopg2.connect(conn_string)
cur=conn.cursor()

def check_if_table_exists(schema,table):
    cur.execute("select exists(select * from information_schema.tables where␣
 ↪table_schema='{schema}' AND table_name='{table}')".format(schema=schema,␣
 ↪table=table))
    return cur.fetchone()[0]

def check_if_index_exists(index):
    cur.execute("SELECT EXISTS(SELECT * FROM PG_CLASS WHERE relname =␣
 ↪'{index}')".format(index=index))
    return cur.fetchone()[0]

if(check_if_table_exists('EDW','DWH_REDDIT_COMMENTS')):
    print('Table EDW.DWH_REDDIT_COMMENTS already exists')
else:
    start_time = time.time()
    cur.execute('set time zone UTC;')
```

```
    cur.execute("""
    CREATE TABLE "EDW"."DWH_REDDIT_COMMENTS" AS
    SELECT
    ROW_NUMBER() OVER (ORDER BY ERS.ID) AS ID,
    TO_TIMESTAMP(GREATEST(ERS.CREATED_UTC ,CAST(ERS.EDITED AS INTEGER))) AS␣
 ↪DATE,
    ERS.SUBREDDIT,
    ERS.AUTHOR,
    ERS.AUTHOR_FLAIR_TEXT,
    ERS.SCORE,
    ERS.BODY AS COMMENT
    FROM "ODS"."EXT_REDDIT_COMMENTS" ERS
    WHERE 1=1
    AND LENGTH(ERS.BODY) > 2
    AND NOT(LOWER(ERS.AUTHOR) LIKE '%\_bot\_%' OR LOWER(ERS.AUTHOR) LIKE␣
 ↪'%\-bot\-%')
    AND NOT(LOWER(REPLACE(ERS.BODY,'''','')) LIKE '%im a bot%')
    AND ERS.BODY <> '[deleted]'
    AND LENGTH(ERS.removal_reason) = 0
    AND ERS.BODY LIKE '% %'
    AND ERS.AUTHOR <> 'AutoModerator'
    AND ERS.AUTHOR <> '[deleted]';
    """)
    cur.execute('COMMIT;')
    print("Table EDW.DWH_REDDIT_COMMENTS created in {execute_time} seconds".
 ↪format(execute_time=math.trunc(time.time()-start_time)))

if(check_if_index_exists('IDX_DWH_REDDIT_COMMENTS#01')):
    print('Index already exists')
else:
    start_time = time.time()
    cur.execute("""
    CREATE INDEX "IDX_DWH_REDDIT_COMMENTS#01"
    ON "EDW"."DWH_REDDIT_COMMENTS" USING BTREE(
        "id" ASC NULLS LAST,
        "date" ASC NULLS LAST
    )
    TABLESPACE PG_DEFAULT;
    """)
    cur.execute('COMMIT;')
    print("Index created in {execute_time} seconds".format(execute_time=math.
 ↪trunc(time.time()-start_time)))
```

```
Table EDW.DWH_REDDIT_COMMENTS already exists
Index already exists
```

1. We filtered our data and transformed epoch date to readable date and added numeric id to work our data with batch processing. It reduced our row count 54.504.410(with 33.3GB) to

48.690.746(with 24.5GB) with 11% reduction in rows and 27% reduction in size.

2. Added index to increase our read speed from table.

[2]:

```

We are getting some price and key data to analize how much we would gain if we presented adds based on their comments.

7.1 Removing stopwords and using Natural Language Processing while Detecting Language

Stopwords are commonly used words that must be not stored because they do not give any significant value to analyze. We are going to remove them from our table so we can lower our datasize and proccess our data faster.

We must test which libraries to use and how to use them;

[3]:
```
import pycld2

value = 'Testing this value'
print("String '{test_value}' returns: {most_confident_language_tuple}\n".
 ↪format(test_value=value,most_confident_language_tuple=pycld2.
 ↪detect(value)[2][0])) #This will return the language with highest confidence␣
 ↪score.
value = 'Bu değeri deniyoruz'
print("String '{test_value}' returns: {most_confident_language_tuple}\n".
 ↪format(test_value=value,most_confident_language_tuple=pycld2.
 ↪detect(value)[2][0]))
value = 'Test text'
print("String '{test_value}' returns: {most_confident_language_tuple}\n".
 ↪format(test_value=value,most_confident_language_tuple=pycld2.
 ↪detect(value)[2][0]))
```

```
String 'Testing this value' returns: ('ENGLISH', 'en', 95, 1077.0)

String 'Bu değeri deniyoruz' returns: ('TURKISH', 'tr', 95, 1706.0)

String 'Test text' returns: ('Unknown', 'un', 0, 0.0)
```

[4]:
```
import nltk
import pycld2
from nltk.corpus import stopwords

nltk.download('stopwords', quiet=True)
```

```
stop = stopwords.words('english')

sql_command = 'SELECT * FROM "{schema}"."{table}" WHERE ID = 15;'.
 ↪format(schema='EDW', table='DWH_REDDIT_COMMENTS')
df = pd.read_sql(sql_command,conn)
print("Original comment:\n{comment}\n".format(comment=df['comment'][0]))

df['comment'] = df['comment'].apply(lambda x: ' '.join([word for word in x.
 ↪lower().split() if word not in (stop)]))

print("Comment after removing stopwords:\n{comment}\n".
 ↪format(comment=df['comment'][0]))

start_time = time.time()
cur.execute("""
UPDATE "EDW"."DWH_REDDIT_COMMENTS"
SET "comment" = %(comment)s
WHERE "id" = %(id)s
""", {'comment': str(df['comment'][0]), 'id': int(df['id'][0])})

print("Updated record(s) in {execute_time} seconds\n".format(execute_time=math.
 ↪trunc(time.time()-start_time)))

sql_command = 'SELECT * FROM "{schema}"."{table}" WHERE ID = 15;'.
 ↪format(schema='EDW', table='DWH_REDDIT_COMMENTS')
df = pd.read_sql(sql_command,conn)
cur.execute('ROLLBACK;')
print("Comment in table:\n{comment}\n\n".format(comment=df['comment'][0]))

df['comment_language_code'] = pycld2.detect(str(df['comment']))[2][0][1]
df['comment_language'] = pycld2.detect(str(df['comment']))[2][0][0].lower().
 ↪replace('unknown','english')

df
#Since we are testing here we didn't commit to database so our changes are␣
 ↪going to be rolled back after our session dies. It will be used after␣
 ↪completing our test.
```

```
Original comment:

```

[13]:
```
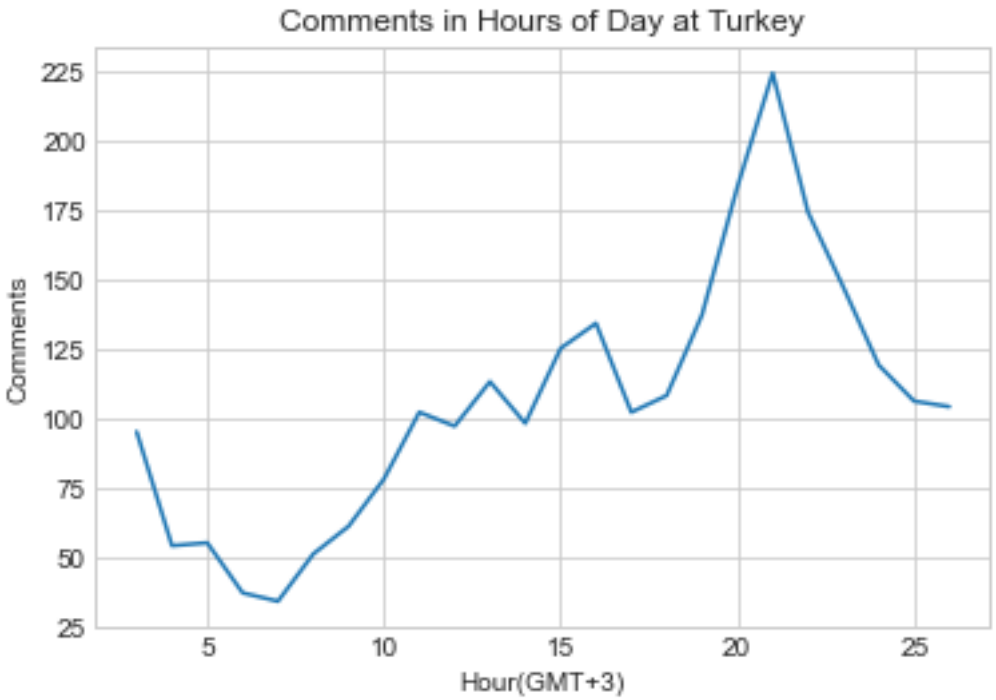
Text(0.5, 1.0, 'Comments in Hours of Day at Turkey')
```



We can clearly see that around 17:00 there is a huge increase of comments, this is probably caused by people leaving from work/school and have free time.

At 21:00 comment count peaks at it's highest then starts to decline because people starting to sleep.

8.3 End Goal - Smart Marketing Analytics

For our end goal we are going split every comment word by word and assume we are showing ads to our customers based on their comments and we sell every 5% of the ads we show to our customers. We must **estimate** how much profit we can get based on our predictions.

[14]:
```
if(check_if_table_exists('EDW','TRF_REDDIT_SUBREDDIT_LANGUAGE_WORD') or␣
 ↪check_if_table_exists('EDW','DWH_REDDIT_SUBREDDIT_LANGUAGE_WORD')):
    print('Table EDW.TRF_REDDIT_SUBREDDIT_LANGUAGE_WORD or EDW.
